

The Above Wireframe has categories , calculator and result section. The purpose of this screen is :

1. The user should be able to choose a category and enter a price.
2. As he enters a price the result section ( where you see Rs 500 ) should display the AfterTax amount—> price + tax amount after % for that category which is the Result amount.

3. As he choose another category a + icon should appear and user should be able to enter next price.

Important information :

You can assume a fixed tax % value for each category that will get added when a user enters an amount.
